

Overview: Residential CCC 101

This Class is designed to educate Water Utility staff members involved with a Residential Cross Connection Control (CCC) Program and inspections. This 6 hour technical session will include a detailed review of the basic components of a WI DNR Compliant CCC Program.

Understanding the relevant rules and regulations which shape a Cross Connection Program is essential. A cost-effective CCC Survey process relies on accurate and consistent documentation of each backflow prevention device or method. Code references will be clarified and “how-to make corrective actions requirements” will be explained for common Residential type Cross Connections.

Objective:

To provide the student with a better understanding of methods and resources available to enable effective Residential Cross Connection Inspections and Surveys.
