Asset Management & Preventative Maintenance

(6 Municipal Water Credits)

This training will focus on industry accepted best practices that are particularly important for distribution and collection systems because no owner’s manual currently exists for this infrastructure. Condition assessment and performance monitoring of water systems are preventative maintenance tasks that are vital to maintaining your water system. Learn about long term strategies for aligning your system with the current regulations to make your life easier. Included will be a live drone inspection of a water system asset.

WHO SHOULD ATTEND
This training class is designed for all Municipal Water Operators, DPWs, Supervisors and Management personnel for Municipal water utilities.
